### Work History

## Contract & freelance experience

Specialist work across three AI platforms and independent frontend QA.

June 2024 – Present

AI Data Annotation & Software Evaluation Specialist

DataAnnotation.tech

- Evaluated AI-generated code, frontend outputs, and written responses against structured annotation guidelines.
- Produced citation-supported assessments to improve consistency and reduce scoring ambiguity.
- Reviewed responsive layouts, UI behaviours, and frontend implementation quality.
- Maintained strong task accuracy while working independently under deadline-driven cycles.

Oct 2023 – May 2024

### Multimodal AI Data Reviewer

Outlier AI

- Reviewed and rated AI-generated multimedia including text-to-video, synthetic voiceovers, and scripts.
- Identified recurring quality issues like visual artifacts and timing inconsistencies.
- Produced detailed quality reports summarising model weaknesses across task types.
- Contributed to large-scale media evaluation workflows.

Mar 2022 – Sep 2023

### Technical AI Tutor & AI Content Evaluator

Mindrift

- Evaluated AI-generated responses for factual accuracy, logical consistency, and clarity.
- Produced annotated feedback and structured assessments across technical writing tasks.
- Authored training materials used in AI fine-tuning and evaluation workflows.

May 2024 – Present

## Frontend Engineer & UI/UX Developer

Freelance

- Designed responsive web applications for independent clients.
- Conducted frontend QA testing, interface reviews, and cross-platform debugging.
- Produced technical documentation and structured project reports.

Mar 2022 – May 2024

## Digital Media Automation Specialist

Independent

- Built AI-assisted YouTube content production workflows with automated scripting and text-to-video.
- Managed quality control for generated scripts, visuals, audio, and publishing assets.
- Edited digital media using professional post-production software.

Work Samples

# Real evaluation snapshots

Structured assessments across code review, frontend QA, and multimedia classification.

AI Response Review Frontend QA Multimedia Evaluation

AI-generated async/await explanation for junior developers

Detected Issues

- HIGHMissing edge-case handling — concurrent rejection not addressed
- MEDWeak accessibility context — no ARIA discussion in UI examples
- LOWOptimization guidance lacks production-level specificity

*Technically correct for basic usage but lacks the depth required at production implementation level. A junior developer following this explanation would encounter unhandled failure scenarios at scale.*

---

[View Full Report →](#)

Medical statistics query — AI response assessment

Detected Issues

- HIGHOutdated 2017 study cited as current evidence without qualification
- HIGHReversed causation relationship in primary data point
- MEDNo confidence qualifier applied to contested statistical claims

*Contains factual inaccuracies that would be harmful if acted upon in a clinical context. Flagged for model retraining with annotated corrections. Recommendation: Reject.*

---

[View Full Report →](#)

SaaS dashboard component — mobile viewport QA review

Detected Issues

- HIGHNav overflow at 375px — items clipped with no scroll fallback
- HIGHPrimary CTA touch targets below 44×44px WCAG minimum
- MEDSecondary label contrast ratio 3.8:1 — fails WCAG AA (4.5:1 required)

*Three critical failures — not production-ready for mobile deployment. Two issues constitute WCAG accessibility violations that create legal exposure in regulated markets.*

---

[View Full Report →](#)

Portrait classification — synthetic vs. authentic photograph

Detection Indicators

- CRITInconsistent specular highlights — lighting direction conflicts detected
- MODBackground text artifacts — illegible glyphs consistent with diffusion models
- LOWFacial asymmetry exceeds natural human variation threshold

*High-confidence classification (92%) as AI-generated. Artifact patterns align with latent diffusion model outputs. Flagged for metadata cross-verification. Classification: SYNTHETIC.*

---

## QA & analysis projects

Independent audits and structured evaluation projects.

Case Study

---

### Frontend QA Audit — SaaS Dashboard

14 responsive issues across 3 breakpoints, 8 WCAG violations documented with remediation notes and severity classification.

[Read case study →](#)

Analysis

---

### LLM Response Quality Analysis

200 responses scored across 8 task types. Identified systemic accuracy gaps in numerical reasoning tasks.

[Read case study →](#)

Workflow

---

## Multimodal Review Pipeline

Designed quality control workflow for AI-generated video and synthetic voiceover evaluation at scale.

[View workflow →](#)

Process

# Evaluation workflow

The consistent methodology I apply to every review engagement.

01

## Review Guidelines

Study the task rubric, scoring criteria, and domain-specific guidelines thoroughly before beginning any review.

02

## Analyze Outputs

Fully read or inspect the submitted output — code, prose, image, or UI — without premature scoring decisions.

03

#### Identify Errors

Catalog factual, structural, and quality issues with precise references, categorized by type and severity.

04

#### Document Findings

Write structured rationale for each issue — precise enough to withstand independent review.

05

#### Deliver Structured Assessment

Submit calibrated score with documented evidence, formatted to platform or client specification.

Credentials

## **Education & certifications**

Academic background and professional credentials.

## Education

---

### BSc Computer Science

University of London — Worldwide Programme

2019 – 2023

Core focus: software engineering, data structures, AI fundamentals.

## Certifications

- 

### Meta Frontend Developer Certificate

Meta · Coursera · 2023

- 

### Google UX Design Certificate

Google · Coursera · 2022

# Ready to improve your AI quality?

Open for contract work in AI evaluation, frontend QA, and annotation workflows.

Response within 24h.
